About Us

Apera AI helps manufacturers make their factories more flexible and productive. Robots enhanced with Apera's Vue software have 4D Vision—the ability to see and handle objects with human-like capability. Apera AI is headquartered in Vancouver, Canada with international Certified Partners.

e-F@ctory Solutions Provided

Apera Vue is computer vision software that guides robots as they move and handle objects. Apera Autopilot enables the robot to take the best path in and out of a movement. The robot and the object it is handling will not collide with other objects in the environment.

Apera Dexterity enables the robot to be able to grasp and precisely place objects. The robot will find the most pickable object in a complex array, align it to the needed position and precisely place it.
