About Us

UBIROS is an early-stage WPI-based startup, set out to free humans from picking and packing tasks, one of the most mundane tasks done by humans, so that they can focus on more value-added activities. Businesses will also get 10 times more efficient in the process. UBIROS conservatively estimate that US food warehouses currently spend \$20B annually in labor costs to perform low-skill simple picking and placing operations. They believe the greatest addressable markets are food packaging and e-commerce order fulfillment, both of which currently utilize human packers and stowers.

e-F@ctory Solutions Provided

UBIROS manufacturers soft robotic grippers, Gentle, that can handle pretty much anything without causing damage. Because Gentle uses mechanical intelligence and was designed with a very simplistic approach, its production cost, and thus the price is lower than the competition by an order of magnitude (i.e. 10 times). Gentle is a cost-effective and humane alternative to using human workers to perform one the most mundane industrial tasks, picking and packing, heavily seen in produce supply and order fulfillment.
