

for a greener tomorrow

Mitsubishi Electric's NC Trainer 2 Plus Software

Equipment Description

Introducing Mitsubishi's computer software option for programming, operating, and diagnosing CNC machines. This NC training product is specified with the same software elements as one would find on a standard CNC Machine with Mitsubishi Electric's state-of-the art M8 series controls.

Uses

Great for classroom environments, the software can be used for learning CNC operations and checking machining programs – all without the fear of crashing the machine. The machining programs created with NC Trainer 2 Plus can be used on actual CNCs.

Software Specifications

- Connects to virtually all laptops.
- Requires a download of the software plus a dongle.
- Comes in multiple user-license configurations

Software Features

- Easy screen-to-screen navigation
- Diagnostics are available
- Real machining action takes place
- Monitor, Setup, & Edit functions are present
- Handle & MDI functions are operable
- Machining Programs can be input or output
- PLC Navigation is available
