

NC Monitor 2

NC Monitor allows you to display an identical screen as the NC display on your personnel computer. By connecting your personnel computer to the NC using Ethernet communications various data can be checked and set on the personnel computer as the operator would set on the standard HMI Screen. When connecting a personnel computer via Ethernet to a network of machines, the NC Explorer (Data Transfer Tool) allows data such as Machining Programs, Common Variables, and Parameters can be transferred from machine to machine.
